TESTIMONIALS

"I had no prior experience in the trades and thanks WEST of Windsor for providing this program. My studies at St. Clair College was very interesting and had hands-on exposure to the CNC machines, lathe and welding."

"I am confident, I will achieve my goals following WEST's unique opportunity and sponsorship for women in the pre-apprenticeship for Millwright and CNC. The pre-apprenticeship program for women, breaks down barriers for women like me."

"I would say stay positive. WEST and St. Clair College are a huge support system and this program will open many opportunities for you to be a huge success."

"I would like to encourage future students to continue with the trade if they start... there is much more to learn after the program is completed... It is worth pursuing, and everything you learn will not only stay with you forever but you can go anywhere to work in the trades."

"If this is what you really want go for it! It is a really rewarding field."
